Flow Meter for Sprinkler System Model: Turbo Lux 3

General Description

The Turbo-Lux 3 is the first fire pump flow measuring device to be approved by all three approval bodies, LPCB, VdS and FM. With only two components, the Turbo Lux 3 is supplied as standard with ISO6182-12 grooved end connections for ease and speed of installation.

Features

- Nominal size from DN50 / 2" to DN300 / 12"
- Pump flow rate from 185 - 19 000 lpm (50 - 5 000 USgpm)
- Measuring flow range from 75 - 38 000 lpm (20 - 10 000 USgpm)
- Measurement accuracy certificate supplied as standard for the bypass meter (optional calibration certificate)
- Easy to install with grooved connections
- Unique installation assembly, just with one threaded connection (no tools required)
- Can be installed in any angle of pipe, horizontal through to vertical.
- Long life span, stainless steel standard up to DN100

Approvals

FM Approved,
LPCB Certificate
VdS Certificate

Technical Data

Measuring principle	Orifice plate flowmeter with variable flowmeter as indication
Nominal Size	DN50/2" grooved ends (Ø60.3 mm) DN65/2½" grooved ends (Ø73.0mm) DN65/2½" grooved ends (Ø76.1mm) DN80/3" grooved ends (Ø88.9mm) DN100/4" grooved ends (Ø114.3mm) DN150/6" grooved ends (Ø165.1mm) DN150/6" grooved ends (Ø168.3mm) DN200/8" grooved ends (Ø219.1mm) DN250/10" grooved ends (Ø273.0mm) DN300/12" grooved ends (Ø323.9mm)
Max. Working Pressure	16 bar (232 psi)
Hydrostatically strength Pressure Strength	64 bar (928 psi) for 5 min (FM) 40 bar (580 psi) for 5 min (LPCB) 64 bar (928 psi) for 10 min (VdS)
Measuring Accuracy	±2.0% of full scale value (FM) ±5.0% of measured value (LPCB) ±2.5% of full scale value (VdS)
Temperature Range	+4 °C to +50 °C (+39°F to +122°F)
Medium	Water

Materials Specifications

Description	Material
Housing	(2"/DN50 to 4"/DN100) Stainless Steel with turned grooved connection (6"/DN150 to 12"/DN300) Coated Steel with rolled grooved connection*
Differential Pressure Tube	Brass
Float	Stainless Steel
Bypass Orifice	Stainless Steel
Filter	Stainless Steel
Seal	NBR

* Optional in stainless steel with rolled grooved connection

Manufactured by Mecon who hold FM Approval, LPCB and VdS Certificates

Flow Meter for Sprinkler System Model: Turbo Lux 3

Installation of the orifice plate

A straight section of pipe is required before (5x diameter) and after (2x diameter) the meter.

A straight inlet path of 5 x D is required if an one quarter pipe is mounted before

When valves or pipe fittings are installed in the straight section of pipe before the flow meter, the straight section length must be increased to 10x diameter. The connection pipes must be of the same diameter as the flow meter.

A straight inlet path of min. 10 x D is required if a valve, fitting or T-piece pipe is mounted before.

Installation and mode of operation

The orifice plate flowmeter Turbo-Lux 3 consists of an orifice plate unit that is installed in the pipework and a detachable bypass meter. The bypass meter contains a conical glass tube with float. The water flows vertically from top to bottom through the flow tube at the upper end of a side panel. An inlet filter largely prevents the ingress of foreign bodies. The Inlet and outlet ports for the bypass are arranged concentrically to ensure easy alignment with the orifice plate unit.

Mounting the bypass meter

- The bypass meter is calibrated with the delivered orifice plate. Before installation please ensure that the serial numbers of the orifice plate and the bypass meter match.
- The bypass meter must always be mounted vertically so that the float can move freely within the tube.
- The nut and the cap should only be hand tightened.
- Lubricate both the nut and cap threads.
- The tube should be filled with water slowly to avoid water hammer damage.
- Please ensure that the pipeline is empty before removing the bypass meter.
